

Title: A new perspective on Einstein's cosmology

Speaker: Cormac O'Raifeartaigh

Institution: Waterford Institute of Technology, Ireland
(also: Dublin Institute for Advanced Studies, Ireland)

Abstract:

This talk presents a review of some exciting new findings concerning Einstein's models of the expanding universe. The findings include some puzzling numerical anomalies in Einstein's cosmic model of 1931, a little-known review of relativistic cosmology published in 1933, and a 'steady-state' model that was abandoned before publication.
